FOR PLANT HEALTH AND STRESS RELIEF

Throughout history Seaweed has been used in growing crops. It contains literally every nutrient known to man. Our **NutriMagic** is formulated using cold-water North Atlantic Ocean variety and not fresh water lake type, thus providing for maximum nutrition.

Our seaweed formula contains the most studied type of seaweed, known as **ASCOPHYLLUM NODOSUM**. It has Research has shown it to provide growth regulators and growth promoters. To an already superb product we add organic carbon, vitamins, enzymes, and molasses.

This unique balance in the blending of **NutriMagic** assists in:

- increasing fruit size, color, brightness and taste
- lateral branch growth in trees
- longer shelf life of fruits and vegetables
- more marketable yields - larger fruit
- increasing crop tolerance to stressful conditions
- more soluble "pounds solid"

Our **NutriMagic** liquid formula contains a wide variety of micro-nutrients plus Riboflavin, Niacin, Choline, Beta Carotene, Pantothenic Acid, Folic Acid, Folinic Acid, and Alginic Acid. **NutriMagic** is a foliar applied product compatible with most other fertilizer solutions, though a compatibility test is always recommended.

There are many types of seaweed on the market. Not all are equal. University study has proven that the best source of seaweed comes from the clean cold waters of the North Atlantic. The reason for this is because the **Ascophyllum Nodosum** variety found there only grows in cold water which helps lock in nutrients. **Ascophyllum Nodosum** is recognized as an excellent natural fertilizer and source for organic matter. Research on plant growth conducted over the last two decades has demonstrated that the plants assimilate essential micronutrients more readily when they are applied directly as a foliar feed than when applied through the soil in an organic form.

Our **NutriMagic** formula contains Cytokinins, Indoles, Hormones, Auxins and Gibberellins. It is accepted by the OCIA standards as "organic"

Cytokinins - are cell division factors, which rapidly divides cells

Indoles - are naturally occurring plant growth promoters for root development and bud initiation.

Auxins - promote rooting and cell enlargement.

Naturally high in potassium, our **NutriMagic** supplies a wide range of carbohydrates including mannitol and organic acids. Mannitol is a natural chelating agent, which can release unavailable trace elements already in the soil, for root uptake. **NutriMagic** also contains NPK in natural/organic amounts to make this nutritional formula not only effective, but when used as directed, safe for our environment and for **YOU** as well.

24% Urea Nitrogen, 4% P, 8% K
